

# Achieving **Sustainable** Behavioral Health Integration through Adaptation of the Behavioral Health Clinician into the Primary Care Milieu

In order for Behavioral Health Clinicians to shift into the primary care environment there are **essential skills teams must develop and continuously enhance to ensure success.**

**New levels of collaboration with colleagues**

**Language**

**Speed**

**Short term brief interventions**

**20-mins to diagnosis, tx plan, & document**

**Pro-active from re-active and "selling" our services**

**New roles**

Putting it all together requires agility and flexibility. Behavioral Health Clinicians need the training and support to implement the skills above to maximize the integrated care team's potential. **NSI can set you on the path to success.**
